

## Aluminum Composite Panel Production Line

### [LSFH1600 \( 1250 \) Aluminum Composite Panel Production Line](#)

Our LFSH1250\LFSH1600 aluminum composite panel production lines is specially produced for producing a new metallic and plastic composite material (aluminum composite panel) by hot composite for macromolecule adhesive film with the coating aluminum and the PE core. We also can use the same machine for compounding steel and plastic together.

The aluminum composite panel not only has the characters of light and sound insulation, heat insulation, fireproof, high strength, rich and stable color, easily fixed, but also with a fair design and presentable appearance. It has a very promising future in the construction market.
